SUMMARY

Dynamic professional with a foundation in software engineering and a strong focus on collaboration and adaptability. Proven ability to develop innovative solutions and manage projects effectively, leveraging skills in Python and React to drive results.

EDUCATION AND TRAINING

Middlesex University Mauritius **Expected July 2026**
BSc (Hons) Information Technology *Mauritius*

NIIT Abuja **June 2025**
Advanced Diploma in Technology (Software Engineering) *Abuja, Nigeria*

EXPERIENCE

Freelancer **March 2026 – Current**
Clients *Port Louis, Mauritius*

- Collaborated with clients to define project requirements, delivering tailored creative solutions.
- Managed multiple projects concurrently, ensuring on-time delivery that met client expectations.
- Adapted to changing client needs, maintaining a flexible approach to project execution.

Student **October 2023 – June 2025**
NIIT Abuja *Abuja, FCT*

- Completed coursework in programming, data structures, databases, networking, and software engineering principles.
- Developed academic projects to address real-world problems using problem-solving methodologies.
- Applied object-oriented programming concepts in practical assignments and class projects.
- Implemented database design and management concepts (PostgreSQL, MongoDB, SQLite).
- Participated in debugging, testing, and optimizing code to enhance software functionality.
- Applied Agile methodologies in team-based academic projects.
- Wrote technical documentation and project reports to ensure clarity in structured development processes.

PROJECTS

SchooLama — Full-Stack Educational Dashboard **2026**

- Developed a comprehensive school management dashboard with Next.js 14 App Router, providing dedicated portals for Admins, Teachers, Students, and Parents.
- Designed an intricate relational database schema using PostgreSQL and Prisma ORM to seamlessly address daily operations like classes, exams, homework, events, and announcements.
- Implemented secure dual-method authentication (Credentials & OTP) via NextAuth.js, alongside Stripe integration for efficient school fee payment processing.
- Configured media asset storage leveraging Cloudinary API and automated outbound SMTP email communications using Nodemailer.
- Ensured seamless deployment readiness by resolving complex Prisma migration issues, fixing Next.js SWC compilation/ESLint strict-type errors, and standardizing container orchestration via Docker.

BMO — Budget Money Online **2025 – 2026**

- Built a full-stack collaborative personal finance web app inspired by YNAB, supporting zero-based budgeting with month-to-month planning and hierarchical category management.
- Implemented real-time multi-user synchronization using Socket.io, enabling live budget updates and an in-app group messaging system with reply threading.
- Designed a role-based access control system (Owner, Editor, Viewer) with secure JWT authentication via NextAuth.js and bcrypt password hashing.
- Built a type-safe REST API using Next.js 14 App Router and Prisma ORM with PostgreSQL, covering accounts, transactions, categories, goals, and financial reports.
- Containerized the database with Docker and managed schema versioning through Prisma migrations; deployed on Vercel.

Intelligent Feedback Engine (Final Year Project) **2025 – 2026**

- Designed and developed an AI-driven feedback engine to analyze user input and generate structured, actionable responses.
- Implemented natural language processing techniques to interpret and categorize feedback data.
- Built backend logic to process and store feedback using Node.js, Express, and MongoDB Atlas.
- Integrated Groq LLM API for intelligent feedback generation and Local Python Execution for code validation.
- Documented system architecture, data flow, and implementation methodology.

Business Intelligence & Data Analytics Project **2025**

- Performed exploratory data analysis (EDA) on real-world datasets sourced from Kaggle using Python, Tableau, and Excel.
- Cleaned and transformed raw data using statistical and data preprocessing techniques.
- Applied data visualization tools to identify trends and actionable insights from Kaggle datasets.
- Generated business intelligence reports using Weka and Excel to support data-driven decision-making.

SKILLS

Languages & Frameworks: Python, Node.js, FastAPI, React, Next.js, TypeScript
Databases: PostgreSQL, MongoDB, SQLite
Tools & Cloud: AWS, Docker, Git, Agile Methodologies, Tableau, Weka
